                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression in the first soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated but of the invention. The current sequence is not shown within the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           patient, which comprise detecting the level of expression in a tissue sample of two or more genes selected from those shown in ABT09867-ABT11112, where a differential expression of the genes indicates breast cancer. The methods are useful in diagnosing, treating, detecting the progression, and in monitoring treatment of breast cancer in patients. The methods are also useful as a screening tool for agents that modulate the onset or progression of breast cancer. The breast cancer genes may be used as diagnostic markers for the prediction or identification of the malignant state of breast tissue, for confirming the type and progression of cancer, and for drug screening and assays. The present sequence is a coding sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ds; gene; osteopathic; antiinflammatory; antiarthritic; ge joint space narrowing; osteophyte development; joint pain; osteoarthritis; SNP; single nucleotide polymorphism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 122748 BP; 32088 A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Diagnosing breast cancer in a patient comprises detecting the level gene expression in cell or tissue samples, where a differential gene expression is indicative of breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Orr MS,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method of determining susceptibility of an individual to joint space narrowing and/or osteophyte development and/or joint pain comprising identifying whether the individual has at least one polymorphism in a polymuclectide encoding at least one of the protein listed in the specification. The methods, composition and agent are useful for modulating the susceptibility of an individual to joint space narrowing and/or osteophyte development and/or joint pain that is associated with a disease, preferably osteoarthritis. The cell line and the non-human animal are useful for screening for an agent for diagnosing an individual having susceptibility to joint space narrowing and/or osteophyte development and/or joint pain. This sequence corresponds to the polymucleotide encoding a protein listed in the specification. (Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                     viral infection; parasitic infection; protozoal infection; fungal infection; sterile inflammatory disease; psoriasis; rhumatoid arthritis; glomerulonephritis; asthma; thrombosis; cardiac reperfusion injury; renal reperfusion injury; ARDS; adult respiratory distress syndrome; inflammatory bowel disease;
                                                                                                                                                                                                                                                                                                                                                              adult regitatory distress syndrome; inflammatory power under the disease; ulcerative colitis; periodontal disease; Crohn's disease; ulcerative colitis; periodontal disease; crannilocyte activation; chronic inflammation; allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Determining susceptibility of an individual to joint space narrowing, osteophyte development and/or joint pain comprises identifying whether the individual has at least one polymorphism in a polynucleotide encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; 88; granulocytic cell; DNA chip; bacterial infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human cDNA differentially expressed in granulocytic cells #1368.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABK84797

Mi is useful for diagnosing the presence of cancer cells or non-cancer cells in a tissue sample, where the cancer is malignant pleural mesothelioma (MPM), lung adenocarcinoma, squamous carcinoma, medulloblastoma, prostate cancer, breast cancer, diffuse large B-cell lymphoma, follicular lymphoma and ovarian cancer, and for determining prognosis or outcome of a cancer patient. The ratio of expression levels of differentially expressed genes is used as an indicator of cancer type, cancer class, and/or cancer prognosis, all of which are useful for determining a course of treatment of a patient. The present sequence encodes a human protein which is used in an example from the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cc cells or non-cancer cells in a tissue sample, determining prognosis or contcome of a cancer patient, selecting a course of treatment for a course of a cancer patient, selecting a course of treatment for a cc subject having or suspected of having malignant pleural mesothelioma (MPM) and evaluating treatment of MPM comprising determining the ratio of the expression level of a set of genes differentially expressed in a cc cancer tissue. The cancer is chosen from MPM, lung adenocarcinoma, diffuse large B-cell lymphoma, follicular lymphoma and ovarian cancer. The method is useful for diagnosing MPM in a subject suspected of having the method is useful for diagnosing MPM in a subject suspected of having the expression of nucleic acid markers or comparession products in the tissue sample suspected of being cancerous from a subject and determining the expression of nucleic acid markers or the expression products in the tissue sample. This sequence this patient cd did not form part of the printed specification but was obtained in clear content of the printed specification but was obtained in electronic format directly from USPTO at sequence data for this patient contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                            CC The invention also relates to a peptide array comprising two or more considered polypeptides encoded by a CA nucleic acid sequence, a compound CC that binds to a polypeptide, an isolated antibody or its fragment which CC binds to a polypeptide, which is prepared by immunizing a host animal CC dinds to a polypeptide, which is prepared by immunizing a host animal CC fragment and collecting cells from the host expressing antipen binding CC fragment and collecting cells from the host expressing antipen binding CC fragment and collecting cells from the host expressing antibodies against the antipody and a carrier, a method of screening for anticancer activity, a CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a method of tracting cancer and a method of inhibiting expression of a CA concleic acids. The antibody is useful for detecting the presence or cabeence of cancer cells in an individual which involves contacting cells from the individual with the presence of cancer cells in an individual which involves contacting cells complex correlates with the presence of cancer cells in an individual. The composition is useful for inhibiting growth of cancer cells in an individual. The invention is also useful for dagnosing in the cancer cells in an individual. The invention is also useful for dagnosing in the cancer cells in an endividual or for delivering a therapeutic agent to cancer the invention is also useful for dagnosing in the cancer cells in an individual or for delivering a complex concerning the cancer cells in the c

The invention relates to cancer-associated proteins (CAP) and the cancer-associated (CA) nucleic acids encoding them. The invention also relates to a method for treating cancers involving administering to a patient an inhibitor of CAP, and a method of screening for anticancer activity in a potential drug involving providing a cell that expresses a CA gene, contacting a tissue sample derived from a cancer cell with an anticancer drug candidate and monitoring the effect of the anticancer drug candidate on expression of the CA gene. The CAP proteins are useful for detecting cancer associated with expression of a CAP protein in a test cell sample and for screening for a bioactive agent capable of modulating the activity of a CAP protein. The CA nucleic acids are useful for diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method of determining susceptibility of an individual to joint space narrowing and/or osteophyte development and/or joint pain comprising identifying whether the individual has at least one polymorphism in a polymucleotide encoding at least one of the protein listed in the specification. The methods, composition and agent are useful for modulating the susceptibility of an individual to joint space narrowing and/or osteophyte development and/or joint pain that is associated with a disease, preferably osteoarthritis. The cell line and the non-human animal are useful for screening for an agent for diagnosing an individual having susceptibility to joint space narrowing and/or osteophyte development and/or joint pain. This sequence corresponds to the polynucleotide encoding a protein listed in the specification. (Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human cancer-associated (CA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18-NOV-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 190117 BP; 47446 A; 48907 C; 48857 G; 44888 T; 0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
muleic acid (I). Also described: (1) an expression vector comprising (I) (2) a host cell comprising (I) or the expression vector; (3) a comprising to the above encoded within an open reading comprising that binds to the above polypeptide; (6) a hybridoma that the produces the above monoclonal antibody; (7) a pharmaceutical composition comprising the above antibody and a pharmaceutical excipient; (8) a kit for detecting cancer cells, comprising the (monoclonal) antibody conscitudes comprising the (monoclonal) antibody conscitudes comprising the (monoclonal) antibody conscitudes conscituded above; (9) methods for diagnosing cancer or for detecting the presence or absence of cancer cells in an individual; (10) a method for inhibiting growth of cancer cells in an individual; (11) a method for continuous comprising the monoclonal and individual; (12) an electronic library comprising the above polynucleotide or polypeptide, or their fragments; (13) methods of screening for anticancer activity or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

CC control is indicative of Noonan syndrome; in the test subject, and cativity of a PTPN11 protein encoded by the level of expression or activity in a control subject, where an increased expression or basal cC comprising assessing the level of expression or activity of a PTPN11 CC protein in the test subject, and comparing it to the level of expression or activity in a control subject, where an increased expression or basal cC control is indicative of Noonan syndrome; (3) treating Noonan syndrome in cC a patient, comprising administering an agent that modulates the cC expression or activity of a PTPN11 protein in association with a carrier; CC (4) an isolated PTPN11 variant comprising a mutation resulting in cC increased level of PTPN11 activity; (5) an isolated cell comprising a vector comprising a mucleic acid encoding the PTPN11 variant of (4), rector comprising a mucleic acid encoding the PTPN11 variant of (4),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                333333

                                                                                                                                                                                                           in a subject. The method comprises detecting a mutation in the protein tyrosine phosphatase 11 (PTNN1) gene in a subject, where the mutation results in increased PTPN11 expression or activity as compared to control. The human PTPN11 gene is located on chromosome 12, more specifically to 12q24. Also described: (1) a kit for diagnosing Noonan syndrome, comprising an oligonucleotide that specifically hybridises to or adjacent to a site of mutation of a PTPN11 gene that results in increased activity of a PTPN11 protein encoded by the gene or an antibody that results fingly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gelb
                                                                                                                                                                                                                                                                                                                               The present invention describes a method for diagnosing Noonan syndrome in a subject. The method comprises detecting a mutation in the protein
                                                                                                                                                                                                                                                                                                                                                                              Claim 24; SEQ ID NO 33; 262pp; English.

(I) has cytostatic and neuroprotective activities, and can be C2 cused as a modulator of FTPN11 activity. (W2) is useful for treating a C3 haematologic disorder such as acute lymphoblastic leukaemia (ALL), acute mysloid leukaemia (AML), in a patient. (M3) is useful for resting a cancer of pre-cancerous condition in a subject, where c the cancer is lung cancer, colorectal cancer, melanoma and leukaemia. The colorated on chromosome 12. more specifically to 12624.

This invention relates to novel polynucleotides encoding human secreted proteins. Specifically, it refers to the vectors, host cells, recombinant and synthetic methods for producing human polynucleotides, polypeptides and antibodies. Furthermore, it relates to screening methods to identify agonists and antagonists that can be used to inhibit or enhance the production and function of the secreted proteins. The present invention describes these compositions as useful for diagnosing, treating or preventing disorders such as cancer, haematopoietic diseases including prostatitis and inguinal hermia, musculoskeletal diseases including systemic lupus crythematosus and gout, cardiovascular disease including systemic lupus crythematosus and gout, cardiovascular disease including

arrhythmia and hypernatraemia,

mixed

New isolated nucleic acids and polypeptides, useful for diagnosing, treating, preventing or ameliorating diseases or disorders e.g. cancer, anemia, arthritis, asthma, inflammatory bowel disease or Alzheimer's

This polynucleotide is a DNA fragment of a BAC clone that encodes a human secreted protein of the invention. NOTE: This sequence does not appear in the printed specification but has been obtained in electronic format from the US patent office at the following web site www.segdata.uspto.gov/sequence.html; Document ID: 20040010132.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             alcohol syndrome and Down's syndrome, excretory diseases including urinary incontinence and renal disorders, neural or sensory disease including Alzheimer's disease and meningitis, respiratory disease including emphysema and occupational lung disease, endocrine diseases including diabetes and glomerulonephritis, digestive diseases including portal hypertension and irritable bowel syndrome and connective tissue of epithelial diseases including soleroderma and epidermolysis bullosa. As such, there are various activites such as cytostatic, antianemic, antiarthritic, antiasthmatic, anti-HIV, immunosuppressive,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; immune; haematopoietic; immune/haematopoietic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis; ds.

REFERENCE FOR CONTROL FOR THE FERENCE FERENCE FERENCE FERENCE FOR FERENCE FOR FERENCE FOR CONTROL FOR FOR FERENCE FERE
                                             CC AAKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM62170 to AAM91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting the CC protein. (I) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic actigen genomic CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           08-NOV-2000

                                                                                                                                                                                                                                                                                                                          ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC AAKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polymucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polymucleotides may be used to produce the secreted (I), by inserting the CC protein. (I) proteins and polymucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic CC cancers and cancer metastases of haematopoietic antigen genomic CC sequences from the present invention. AAK64942 to AAK84950 and AAM82169 CC represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides the protein and coding sequences of number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of diagnosis, treatment and prevention on the system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colitis ulcerative colitis. The present sequence is a genomic DNA fragment

Sequences AAS31827-AAS32182 represent genomic DNA molecules, which encode the liver associated polypeptides of the invention. Liver associated CC polypeptides and their associated polypuclectides are useful in the CC diagnosis, treatment and prevention of various types of disorders in e.g. CC humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a liver associated polynucleotide. The treatable CC disorders include autoimmune diseases such as rheumatoid arthritis, CC hyperproliferative disorders such as neoplasms of the breast or liver, CC disorders for a such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, cerebrovascular CC disorders such as cerebral ischaemia, nervous system disorders such as corneal infection, endocrine disorders such as CC premature labour and infertility, gastrointestinal disorders such as CC crohn's disease, renal disorders such as glomerulonephritis and CC respiratory disorders such as asthma and pleurisy. The polypeptides can calso be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly

CC encompasses polypeptides 90% identical and polynucleotides 95% identical control of the sequences of the invention. The invention additionally relates to combinant vectors and host cells comprising human liver antigen composing or preventing various disorders of the liver. Such conditions (c) polynucleotides, antibodies against human liver antigens, and the use of collever antigen polynucleotides and polypeptides in diagnosing, treating, composing or preventing various disorders of the liver. Such conditions (c) include viral infections (e.g., cytomegalovirus, Espetin-Barr virus, hepatitis A virus, hepatitis B virus and hepatitis C virus), parasitic cinfections (e.g., Clonorchis sinensis, Echinococcus granulosus and confections (e.g., Confections, Confections,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         29-SBP-2000

                                                                                                                                                             cc amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic cc activity, and can be used in gene therapy and vaccine production. (1) cc proteins and polynucleotides may be used in the prevention, diagnosis and ct treatment of diseases associated with inappropriate (1) expression. For cc example, they may be used to treat disorders associated with decreased cc expression by rectifying mutations or deletions in a patient's genome ct that affect the activity of (1) by expressing inactive proteins or to cc supplement the patients own production of (1). Additionally, (1) cc polynucleotides may be used to produce the secreted (1), by inserting the cc protein. (1) proteins and polynucleotides may be used to prevent, (2) diagnose and treat immune/haematopoietic related diseases, especially cc cancers and cancer metastases of haematopoietic diseases, especially cc cancers and cancer metastases of haematopoietic acitigen genomic cc sequences from the present invention. AAK54942 to AAK54950 and AAM82169 cc represent sequences used in the exemplification of the present invention.
